

CA YouTube Trending Video Analysis

Data analytics portfolio project | Python (pandas) + SQL (SQLite) + seaborn | ~40,000 trending-video records, Nov 2017–Jun 2018

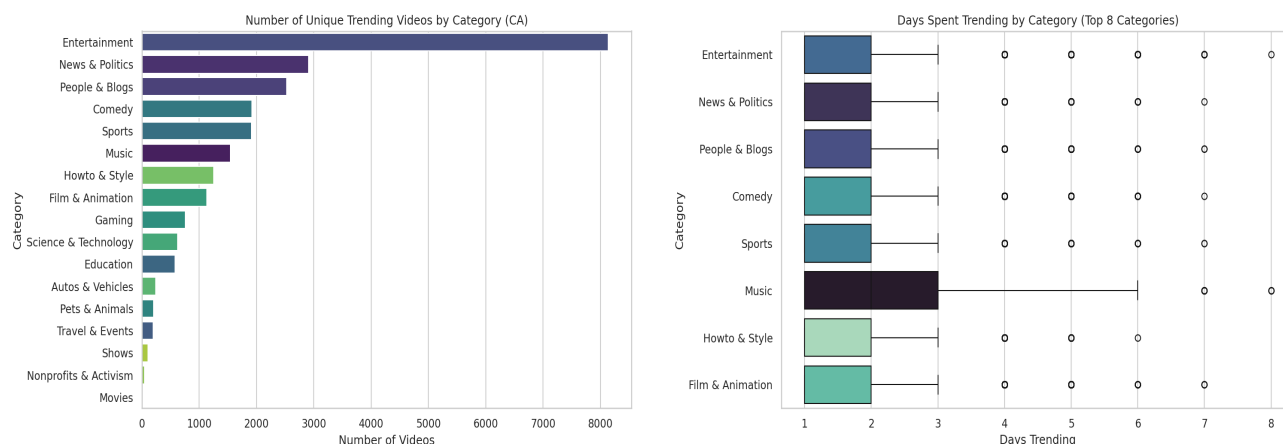

Problem

What characteristics correlate with a video trending on YouTube Canada, and how long does trending status last? This project cleans and analyzes 24,000+ unique trending videos to surface patterns a content strategist could act on.

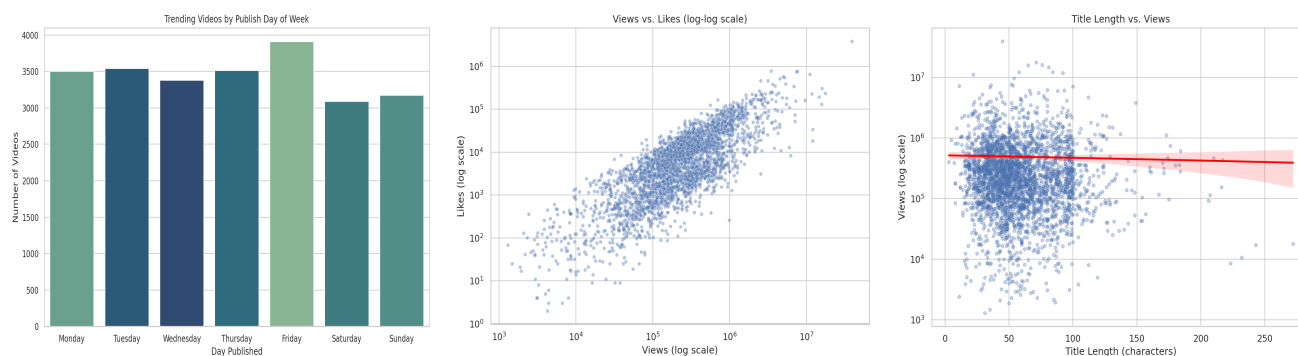

Key Findings

- **Entertainment dominates:** ~34% of unique trending videos are Entertainment — over 2.5x the next category (News & Politics).
- **Trending is brief:** videos stay on the trending list for ~1.7 days on average, with little variation across top categories.
- **Friday is the strongest publish day** for videos that go on to trend, consistent with weekend-viewing content strategies.
- **Views and likes correlate strongly** ($r \approx 0.71$) — likes are a fair proxy for reach.
- **Title length has no meaningful effect on views** ($r \approx -0.01$) in this dataset.

Category Breakdown & Trending Duration
